

Listing of Claims:

1. (Currently Amended) A modular system having adjustable units for use inside closets of different widths, the system comprising a tower module based on lateral screens and multiple shelves, wherein one of the lateral screens is taller than the other, said tower module being fastened onto an enclosure space in a fixed position and is combined on its sides with hanging modules, one of the hanging modules accommodating long clothes and having a shelf panel placed in its upper part and having a hanging pipe held by fastening elements on an enclosure wall and on a shorter of the tower lateral screens; the other hanging module is a double hanging module having two hanging sections with two hanging pipes held by fastening elements on ~~the~~ an opposing enclosure wall and on a taller of the tower lateral screens, ~~the edges of the lateral screens being reinforced with extruded plastic profiles.~~

2. (Previously presented) A modular system according to claim 1, wherein each lateral screen has two coupled sections to form a single lateral screen.

3. (Previously presented) A modular system according to claim 1, wherein the double hanging module has a shelf panel that is supported on the taller screen of the tower module and on the fastening element of the upper hanging pipe, said shelf panel fastened onto back wall through fastening elements and a supporting element for excess load, the supporting element being a fork type which opposes compression stresses.

4. (Previously presented) A modular system according to claim 1, wherein the tower module includes sliding chests of drawers with edges lined and reinforced with extruded PVC edges or with plastic tape.

5. (Currently Amended) A modular system according to claim 4, wherein each of the drawers has members which are assembled through grooved channels, the lateral
